**Continue**

Our comprehensive system solutions will help you advance your medical IoT devices – with low-power efficiency, security and wireless connectivity built-in. Facilitating a wide range of applications and services, 5G expands the reach of cellular connectivity to the enterprise. Discover more in our new paper with ABI Research. NXP experts are headed to Boston, Detroit, and Milan to bring you more technical sessions, demos, and leadership insights. [Current version: 2.5.2 (April 2022)] The Coherent PDF Command Line Tools and C/C++/Python/.NET/Java/JavaScript API allow you to manipulate existing PDF files in a variety of ways. For example: Merge PDF files together, or split them apart Encrypt and decrypt Scale, crop and rotate pages Read and set document info and metadata Copy, add or remove bookmarks Put multiple pages on one (imposition) Stamp logos, text, dates, page numbers Add or remove attachments Losslessly compress PDF files Convert PDF files to and from JSON These tools have been available commercially since 2007, and are widely used in industry and government. Now we're releasing the tools for free, under a special not-for-commercial-use license. If you like the tools and want to use them commercially, or need support, licenses are available from Coherent Graphics Ltd. Commercial use involves anything other than private, personal use. Charities and educational institutions still require a license, but one may be obtained at greatly reduced cost - ask us. If you're still not sure if you need a license, ask us. (The license for our JavaScript API coherentpdf.js is more permissive: it is licensed under the AGPL.) Download binaries now for Windows, Mac, or Linux Pre-built binaries are available for Windows, Mac OS 10.12 and later (x86 or ARM), Linux 32 bit Intel and Linux 64 bit Intel. Download pre-built cpdf command line tool Download pre-built C/C++/Python/.NET API static and shared libraries To install the python library, in addition to the DLLs, you will need to run pip install pycpdflib. The .NET library is also on Nuget, but you will need the DLLs above too. The JavaScript API is available on npm: coherentpdf.js or on GitHub. Build from source Look at the source repository for cpdf, or for the C API, or for the Python API or for the .NET API or for the Java API or for the JavaScript API. You'll need to install the OCaml toolchain, and a couple of simple dependencies, but it's simple to build. User Manual A comprehensive user manual for the Command Line PDF tools can be found as a PDF document, or browsable online. The manuals for the C API and for the Python API and for the .NET API and for the Java API and for the JavaScript API are also available. A paper copy of the Command Line Tools manual can be obtained from Amazon for \$9.99. Command line examples In all cases, on Microsoft Windows, substitute cpdf.exe for cpdf. Select some pages from a file in.pdf and write to out.pdf: cpdf in.pdf 1-3,12,end -o out.pdf Merge some files together: cpdf one.pdf two.pdf three.pdf -o merged.pdf Split a file into single-page files page001.pdf, page002.pdf etc: cpdf -split in.pdf -o page%%.pdf Encrypt a file with 128 bit AES encryption with an owner password but blank user password: cpdf -encrypt AES "pass" "" in.pdf -o out.pdf Output some information about a file: cpdf -info file.pdf Encryption: Not encrypted Permissions: Linearized: true Version: 1.4 Pages: 8 Title: catalogueproduit-UK.qxd Author: James Peterson Subject: Keywords: Creator: QuarkXPress: pictwstps filter 1.0 Producer: Acrobat Distiller 6.0 for Macintosh Created: D:20060926213913+02'00' Modified: D:20060926213913+02'00' Output information about each page: cpdf -page-info file.pdf Page 1: MediaBox: 0.000000 0.000000 768.000000 1366.000000 CropBox: BleedBox: 0.000000 0.000000 768.000000 1366.000000 ArtBox: 0.000000 0.000000 768.000000 1366.000000 TrimBox: 0.000000 0.000000 768.000000 1366.000000 Rotation: 0 Page 2: MediaBox: 0.000000 0.000000 768.000000 1366.000000 CropBox: BleedBox: 0.000000 0.000000 768.000000 1366.000000 ArtBox: 0.000000 0.000000 768.000000 1366.000000 TrimBox: 0.000000 0.000000 768.000000 1366.000000 Rotation: 0 Scale pages to A4 paper: cpdf -scale-to-fit -4portrait in.pdf -o out.pdf Crop a file: cpdf -crop "20mm 20mm 300mm 300mm" in.pdf -o out.pdf Add some text with page numbers: cpdf -add-text "Page %Page of %EndPage" -top 100pt -font "Times-Roman" -font-size 20 in.pdf -o out.pdf Stamp one PDF file over each page of another: cpdf -stamp-on logo.pdf in.pdf -o out.pdf Attach a file to page 5: cpdf -attach-file sheet.xls -to-page 5 in.pdf -o out.pdf Combine several commands together using AND: flip a file vertically and stamp text, then encrypt. cpdf in.pdf -vflip AND -add-text "Page %Page" AND -encrypt 128bit owner "" -o out.pdf Compress a file without loss of information: cpdf -squeeze in.pdf -o out.pdf C API example #include #include "cpdflibwrapper.h" int main (int argc, char \*\* argv) { /\* Initialise cpdf \*/ cpdf\_startup(argv); /\* We will take the input hello.pdf and repeat it three times \*/ int mergedf = cpdf\_fromFile("hello.pdf", ""); /\* Check the error state \*/ if (cpdf\_lastError) return 1; /\* Clear the error state \*/ cpdf\_clearError(); /\* The array of PDFs to merge \*/ int pdfs[] = {mergedpdf, mergedpdf, mergedpdf}; /\* Merge them \*/ int merged = cpdf\_mergeSimple(pdfs, 3); if (cpdf\_lastError) return 1; cpdf\_clearError(); /\* Write output \*/ cpdf\_toFile(merged, "merged.pdf", false, false); if (cpdf\_lastError) return 1; return 0; } Python API example #Merge example import sys import pycpdflib # DLL loading depends on your own platform. These are the author's settings. if sys.platform.startswith('darwin'): pycpdflib.loadDLL("/Users/john/repos/python-libcpdf/libpycpdf.so") elif sys.platform.startswith('linux'): pycpdflib.loadDLL("./libpycpdf.so") elif sys.platform.startswith('win32') or sys.platform.startswith('cygwin'): os.add\_dll\_directory("C:\\OCaml64\\home\\JohnWhittington\\python-libcpdf\\") pycpdflib.loadDLL("libpycpdf.dll") #We will take the input hello.pdf and repeat it three times mergedf = pycpdflib.fromFile("hello.pdf", "") #The list of PDFs to merge pdfs = [mergedf, mergedf, mergedf] #Merge them merged = pycpdflib.mergeSimple(pdfs) #Write output pycpdflib.toFile(merged, "merged.pdf", False, False) .NET API example //Merge example using System; using System.Collections.Generic; using CoherentGraphics; // Initialise cpdf Cpdf.Startup(); // We will take the input hello.pdf and repeat it three times using (Cpdf.Pdf mergedf = Cpdf.FromFile("hello.pdf", "")) { // The list of PDFs to merge List pdfs = new List {mergedf, mergedf, mergedf}; // Merge them Cpdf.Pdf merged = Cpdf.MergeSimple(pdfs); // Write output Cpdf.ToFile(merged, "merged.pdf", false, false); // Dispose of merged PDF merged.Dispose(); } Java API example //Merge example import com.coherentpdf.Cpdf; public static void main(String[] args) { // Initialise cpdf Cpdf cpdf = new Cpdf(); try { cpdf.startup(); } catch (Cpdf.CpdfError e) { System.out.println("Error during cpdf startup"); } // We will take the input hello.pdf and repeat it three times try (Cpdf.Pdf mergedf = cpdf.fromFile("hello.pdf", "")) { // The array of PDFs to merge Cpdf.Pdf[] pdfs = {mergedf, mergedf, mergedf}; // Merge them Cpdf.Pdf merged = cpdf.mergeSimple(pdfs); // Write output cpdf.toFile(merged, "merged.pdf", false, false); // Dispose of merged PDF merged.close(); } catch (Cpdf.CpdfError e) { System.out.println("Error during cpdf operation"); } } JavaScript API example //Load coherentpdf.js const coherentpdf = require('./coherentpdf.js'); //Load the file hello.pdf from the current directory var pdf = coherentpdf.fromFile('hello.pdf', ''); //Merge three copies of it var merged = coherentpdf.mergeSimple(pdf, pdf, pdf); //Write to merged.pdf coherentpdf.toFile(merged, 'merged.pdf', false, false); //Clean up the two PDFs coherentpdf.deletePdf(pdf); coherentpdf.deletePdf(merged); (Coherentpdf.js works in the browser too.) Support If you discover a bug, you can raise an issue in our issue tracker, or email for support. Please note, though, that we prioritise support for paying customers. FAQs Q. My command works, but fails when I put it in a Windows Batch file. A. Some cpdf commands use % as a special character. Use %% instead. Q. Is it any different from the commercial version? A. The community release prints a message when run, and sets the Producer field to show it was the last program to touch the PDF. Q. I want to express thanks for this free program, but I'm not a commercial user. What can I do? A. You can buy a copy of the User Manual on Amazon for \$9.99. Sometimes we may need to merge multiple documents into one when you are using the Microsoft Word applications. In Word, you can merge multiple Word documents into one with one of following tricky ways: Merge multiple documents into one document with Insert Text from File function You can merge multiple documents into one document by using the Text from File function in Word, but by doing this, you will lose the format of documents after merged. 1. Create a new Word document you will place the merged documents, and then click Insert > Object > Text from File. See screenshot. 2. In the opening Insert File dialog box, please (1) open the folder containing documents you will merge; (2) select the documents you will merge; and then (3) click the Insert button. See screenshot: Tip: Holding Ctrl key, you can select multiple documents with clicking them one by one; holding Shift key, you can select multiple adjacent documents with clicking the first one and the last one. 3. If documents you need to merge are saved in different folders, please repeat above Step 1-2 as your need. Note: You can't order documents in merged file, otherwise you insert them one by one. Kutools for Word releases a fantastic Merge feature to help users quickly merge multiple Word documents from many folders. This feature will not only reserve original documents' format in merged file, but also merge documents by your specified order. Click for 60-day free trial! Merge multiple documents into one document with VBA Alternatively, you can use VBA to merge multiple documents into one in Word. 1. Move all Word documents you will merge into the same folder. 2. Rename the Word documents with a series of sequence names. (1) Right click a document and select Rename from the context menu, and then type a new name, such as Part1; (2) Repeat to rename other documents. See screenshot: 3. Double click to open the document you will place at the beginning of merged file. 4. Press Alt + F11 keys together to open the Microsoft Visual Basic for Application window. 5. Click Insert > Module, and then paste below VBA code into the new Module window; VBA: merge multiple documents in Word Sub MergeDocuments() Application.ScreenUpdating = False MyPath = ActiveDocument.Path MyName = Dir(MyPath & "\\\* \*.docx") i = 0 Do While MyName "" If MyName ActiveDocument.Name Then Set wb = Documents.Open(MyPath & "\\\* & MyName) Selection.WholeStory Selection.Copy Windows(1).Activate Selection.EndKey Unit:=wdLine Selection.TypeParagraph Selection.Paste i = i + 1 wb.Close False End If MyName = Dir Loop Application.ScreenUpdating = True End Sub Note: This VBA can only merge Word documents whose file extensions are docx. If you need to merge documents (.doc), please replace docx in the code MyName = Dir(MyPath & "\\\* \*.docx") to doc. 6.Click Run button or press F5 key to apply the VBA. Note: you have to rename the documents with a series of sequence names, otherwise the documents may be disordered or lost in the merged file. Merge multiple documents into one document and keep format with Kutools for Word After you installed Kutools for Word, you don't need to create a new blank document, nor put the document into the same folder. With Merge of Kutools, you can quickly merge multiple documents into one in word. Please do as follows: Kutools for Word is a handy add-in to ease your work and enhance your ability of processing word document. Free Trial for 60 days! Get It Now! 1. Click Kutools Plus > Merge. See screenshot: 2. In the opening Merge Documents dialog box, please add documents you will merge: (1) Click Add Files button; (2) In the Browse dialog box open folder containing documents you will merge; (3) holding Ctrl or Shift key to select these documents; and then (4) click the OK button. See screenshot: Tip: (1) If you need to merge documents that are saved in different's folder, please repeat this step to add them one by one; (2) You can also add all documents saved in one folder in bulk by the Add Folder button.3. Now you return to the Merge Documents dialog box, please (1) order these documents by Move Up and Move Down buttons; (2) specify a break between documents from the Break between documents drop down list; and then (3) click the Merge button. See screenshot: Note: FYI, original formatting of all documents you merged are reserved in the merged result.
